I ate a gluten-free, lactose-free, low carb pizza for lunch today! (It was a raw tomato)

[Moosecock](#) 102 points · an hour ago [reply](#)

They make gluten-free girlfriends now?

## continuous discovery

# continuous... what?

“A critical best practice in Lean UX is building a regular cadence of customer involvement. Regularly scheduled conversations with customers minimize the time between hypothesis creation, experiment design, and user feedback — giving you the opportunity to validate your hypotheses quickly.

In general, knowing you're never more than a few days away from customer feedback has a powerful effect on teams. It takes the pressure off of your decision making because you know that you're never more than a few days from getting meaningful data from the market.”

**- jeff gothelf's "lean ux"**

# continuous discovery

“A critical best practice in Lean UX is building **a regular cadence of customer involvement**. Regularly scheduled conversations with customers **minimize the time between hypothesis creation, experiment design, and user feedback** — giving you the opportunity to **validate your hypotheses quickly**.”

In general, knowing you’re never more than a few days away from customer feedback has a powerful effect on teams. It takes the **pressure off of your decision making** because you know that you’re never more than a few days from getting meaningful data from the market.”

- jeff gothelf's "lean ux"

ethnography in

8) W 122nd St & Riverside Dr, New York, NY 10027, USA

## Problem

## Solution

### 1. Who is the customer?

Identify a market and the customer.

### 2. What is their need?

Identify a real problem to solve.

### 3. Why us?

Are we best placed to solve it?

Does it build on our offerings?

### 4. Define the Product

Define a Minimum Valuable Product to start.

Consider whether we would build, buy or partner.

### 5. Validate with Customer

Test prototypes with customers and their price tolerance.

Adjust based on feedback.

### 6. Is it compelling for us?

With the market, price, fit and solution established - are the numbers compelling enough for this idea?

### 7. Go / No Go

When compared to the other options we could fund, do we still feel the same?

Define Success criteria & fund the project.

## Problem

## Solution

### 1. Who is the customer?

# RO w1 Discussion Guide

## SMB Product Discovery/ Innovation Team

Joe Darrer, Ciaran Madigan, Kelle Link, Claire Shanahan, Nevan Prendeville

Researcher: babz jewell

### SAMPLE:

1. Drivers/ Field Workers
2. Dispatchers and Planners
  - a. Mobile workers or delivery guys **30+ or 200+ stops/week**
  - b. SMB FS and Delivery/Transportation sectors

### HYPOTHESIS:

See various assumptions we are validating/invalidating in the [Research deck >](#)

## CUSTOMER DISCUSSION GUIDE: DISPATCHER, PLANNER

### US/ EU/ UK CUSTOMERS:

Hi! Thanks for talking with us today about your fleet. We're currently researching customer needs around managing the routes driven by field or delivery crews, so today our conversation will focus around these concerns.

### INTRO

1. Can you tell me about your role and responsibilities at your company and in your industry?
2. Can you tell me about your fleet makeup currently?
  - a. Vehicles: types and #
3. How many guys would you have to plan for or manage? **H13**
  - a. What staff / co-workers are available to you to manage them?
4. How much / how often do you need to communicate with your drivers out on the road or on their job sites, about their routes, ie. where they need to go? **H13**
  - a. What information do you want from your drivers?
  - b. What information do you need to make a route plan?
  - c. How many stops do your drivers make in a day?
  - d. what is a stop?
  - e. what does it mean to customers?
  - f. how is stop-efficiency measured?
  - g. How are your drivers' efficiency measured?

Babz Jewell

Resolve

what is a stop?  
what does it mean to customers?  
how is stop-efficiency measured?

Reply...

## Key Talking Points

### Identify triggers

What problem (if any) do they have around scheduling and routing? What struggles have they encountered? *Have participants talk about a recent example of a struggle/pain they had*

### Potential Questions/Discussion Points

- Can you tell me how long it takes to figure routes? How do you do that today?
- What efficiency criteria are you applying? (Fuel? Travel Time?)
- How well would you say you are doing on **meeting your customers' expectations**?
- Is (your) customer wait-time for service delivery an important metric for you? Why?
- What percentage of a journey of your vehicle are loaded at 100% capacity? is this a problem, or not a problem? Why?

### Desired Outcomes

What are they trying to achieve IN/ BY PLANNING ROUTES? How would they measure success? Have participants articulate "measures of success" from their perspective

### Existing Alternatives

How are they solving this problem today? How did they go about choosing this? How satisfied are they?

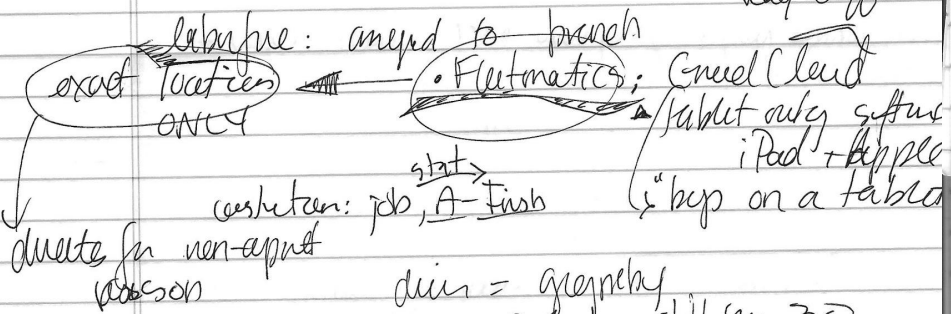

### Inertia and Friction

**What is slowing them down today?** What challenges did they have to overcome with the new solution (if they adopted one)? What barriers exist?

### What's Next

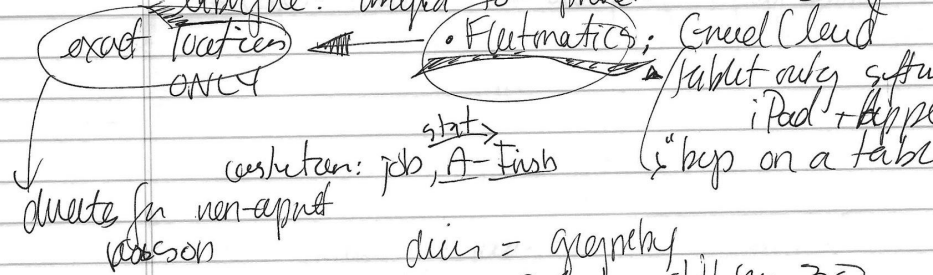

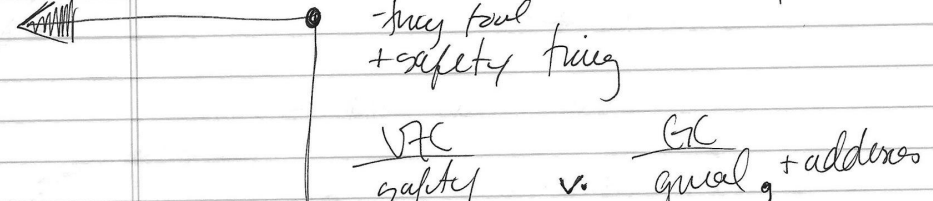

Are they actively looking for something else? What challenges are they trying to overcome?

A photograph of three people in a room with wood-paneled walls. On the left is a man with short brown hair, wearing a dark suit, light blue shirt, and a dark tie with light blue diagonal stripes. In the center is a woman with long brown hair, wearing a patterned jacket with a geometric design in brown and black, and a gold watch on her left wrist. On the right is an older man with grey hair, wearing a dark suit and a blue identification badge. A large, bright cyan diagonal banner with black text is overlaid across the center of the image.
